TruStop

with TruChek

The Delany Difference

Simplicity in Design

THE PROBLEM

Traditional flush valve control stops fail. What happens when they do? Water shutdowns to an entire bathroom, a riser or the building. It is more than just inconvenient. **It should not have to happen!!**

THE SOLUTION

The Delany TruStop with TruChek has a **patented ball valve** design, allowing for easy water shutoff at the stop to replace a failed backcheck **saving time and money,** because no one can afford a water shut down.

THE TRUSTOP BENEFITS

- Ball valve design is reliable and virtually leak free
- Not affected by mono-chloramine systems
- No need to ever schedule a water shutdown
- No need for HEPA containment tents
- **Designed to fit any manufacturers' valve**

A simple ¼ turn, for fast, easy replacement of **the TruChek,** the only repair part ever needed

PART NUMBERS
1010A for 1" supply line (WCs)
1020A for ¾" supply line (urinals)
