The Delany Difference

The Delany Differences

For over 135 years and four generations, our family-owned and operated company has always stood out in the field of commercial flush valves; for our innovations, our quality, our valves' efficiency and now streamlined looks.

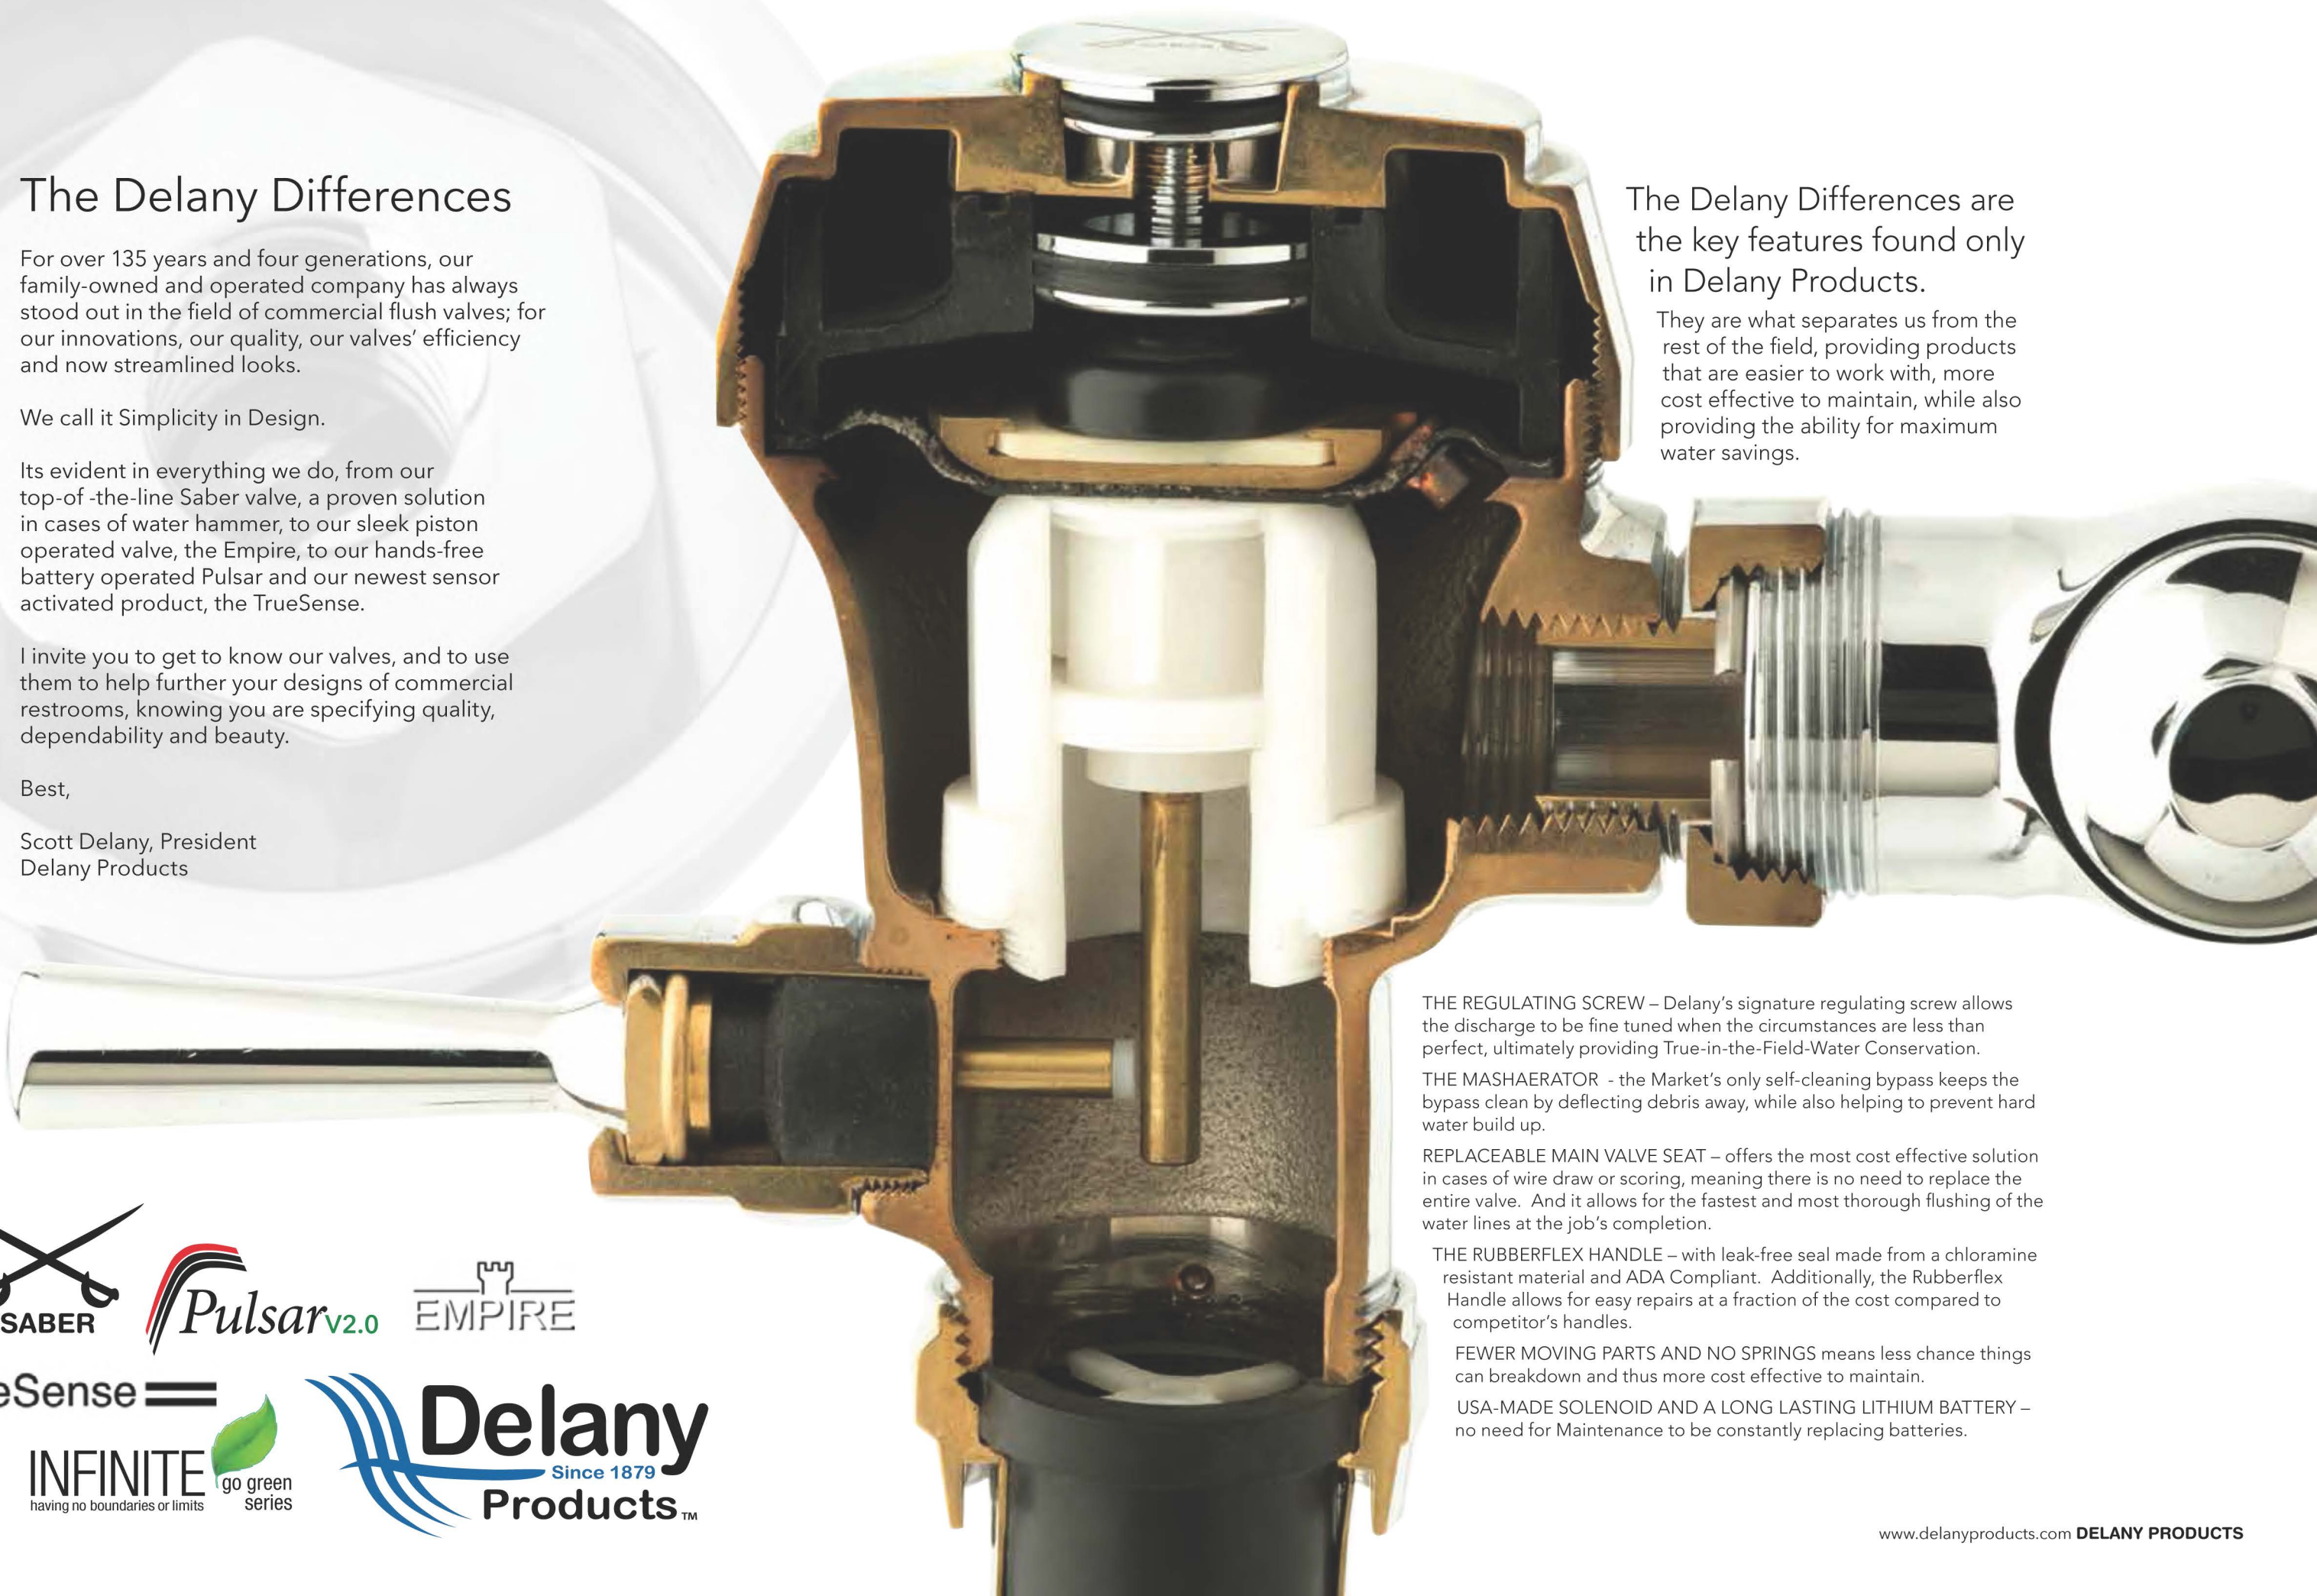

We call it Simplicity in Design.

Its evident in everything we do, from our top-of-the-line Saber valve, a proven solution in cases of water hammer, to our sleek piston operated valve, the Empire, to our hands-free battery operated Pulsar and our newest sensor activated product, the TrueSense.

I invite you to get to know our valves, and to use them to help further your designs of commercial restrooms, knowing you are specifying quality, dependability and beauty.

Best,

Scott Delany, President
Delany Products

The Delany Differences are the key features found only in Delany Products.

They are what separates us from the rest of the field, providing products that are easier to work with, more cost effective to maintain, while also providing the ability for maximum water savings.

THE REGULATING SCREW – Delany's signature regulating screw allows the discharge to be fine tuned when the circumstances are less than perfect, ultimately providing True-in-the-Field-Water Conservation.

THE MASHAERATOR - the Market's only self-cleaning bypass keeps the bypass clean by deflecting debris away, while also helping to prevent hard water build up.

REPLACEABLE MAIN VALVE SEAT – offers the most cost effective solution in cases of wire draw or scoring, meaning there is no need to replace the entire valve. And it allows for the fastest and most thorough flushing of the water lines at the job's completion.

THE RUBBERFLEX HANDLE – with leak-free seal made from a chloramine resistant material and ADA Compliant. Additionally, the Rubberflex Handle allows for easy repairs at a fraction of the cost compared to competitor's handles.

FEWER MOVING PARTS AND NO SPRINGS means less chance things can breakdown and thus more cost effective to maintain.

USA-MADE SOLENOID AND A LONG LASTING LITHIUM BATTERY – no need for Maintenance to be constantly replacing batteries.

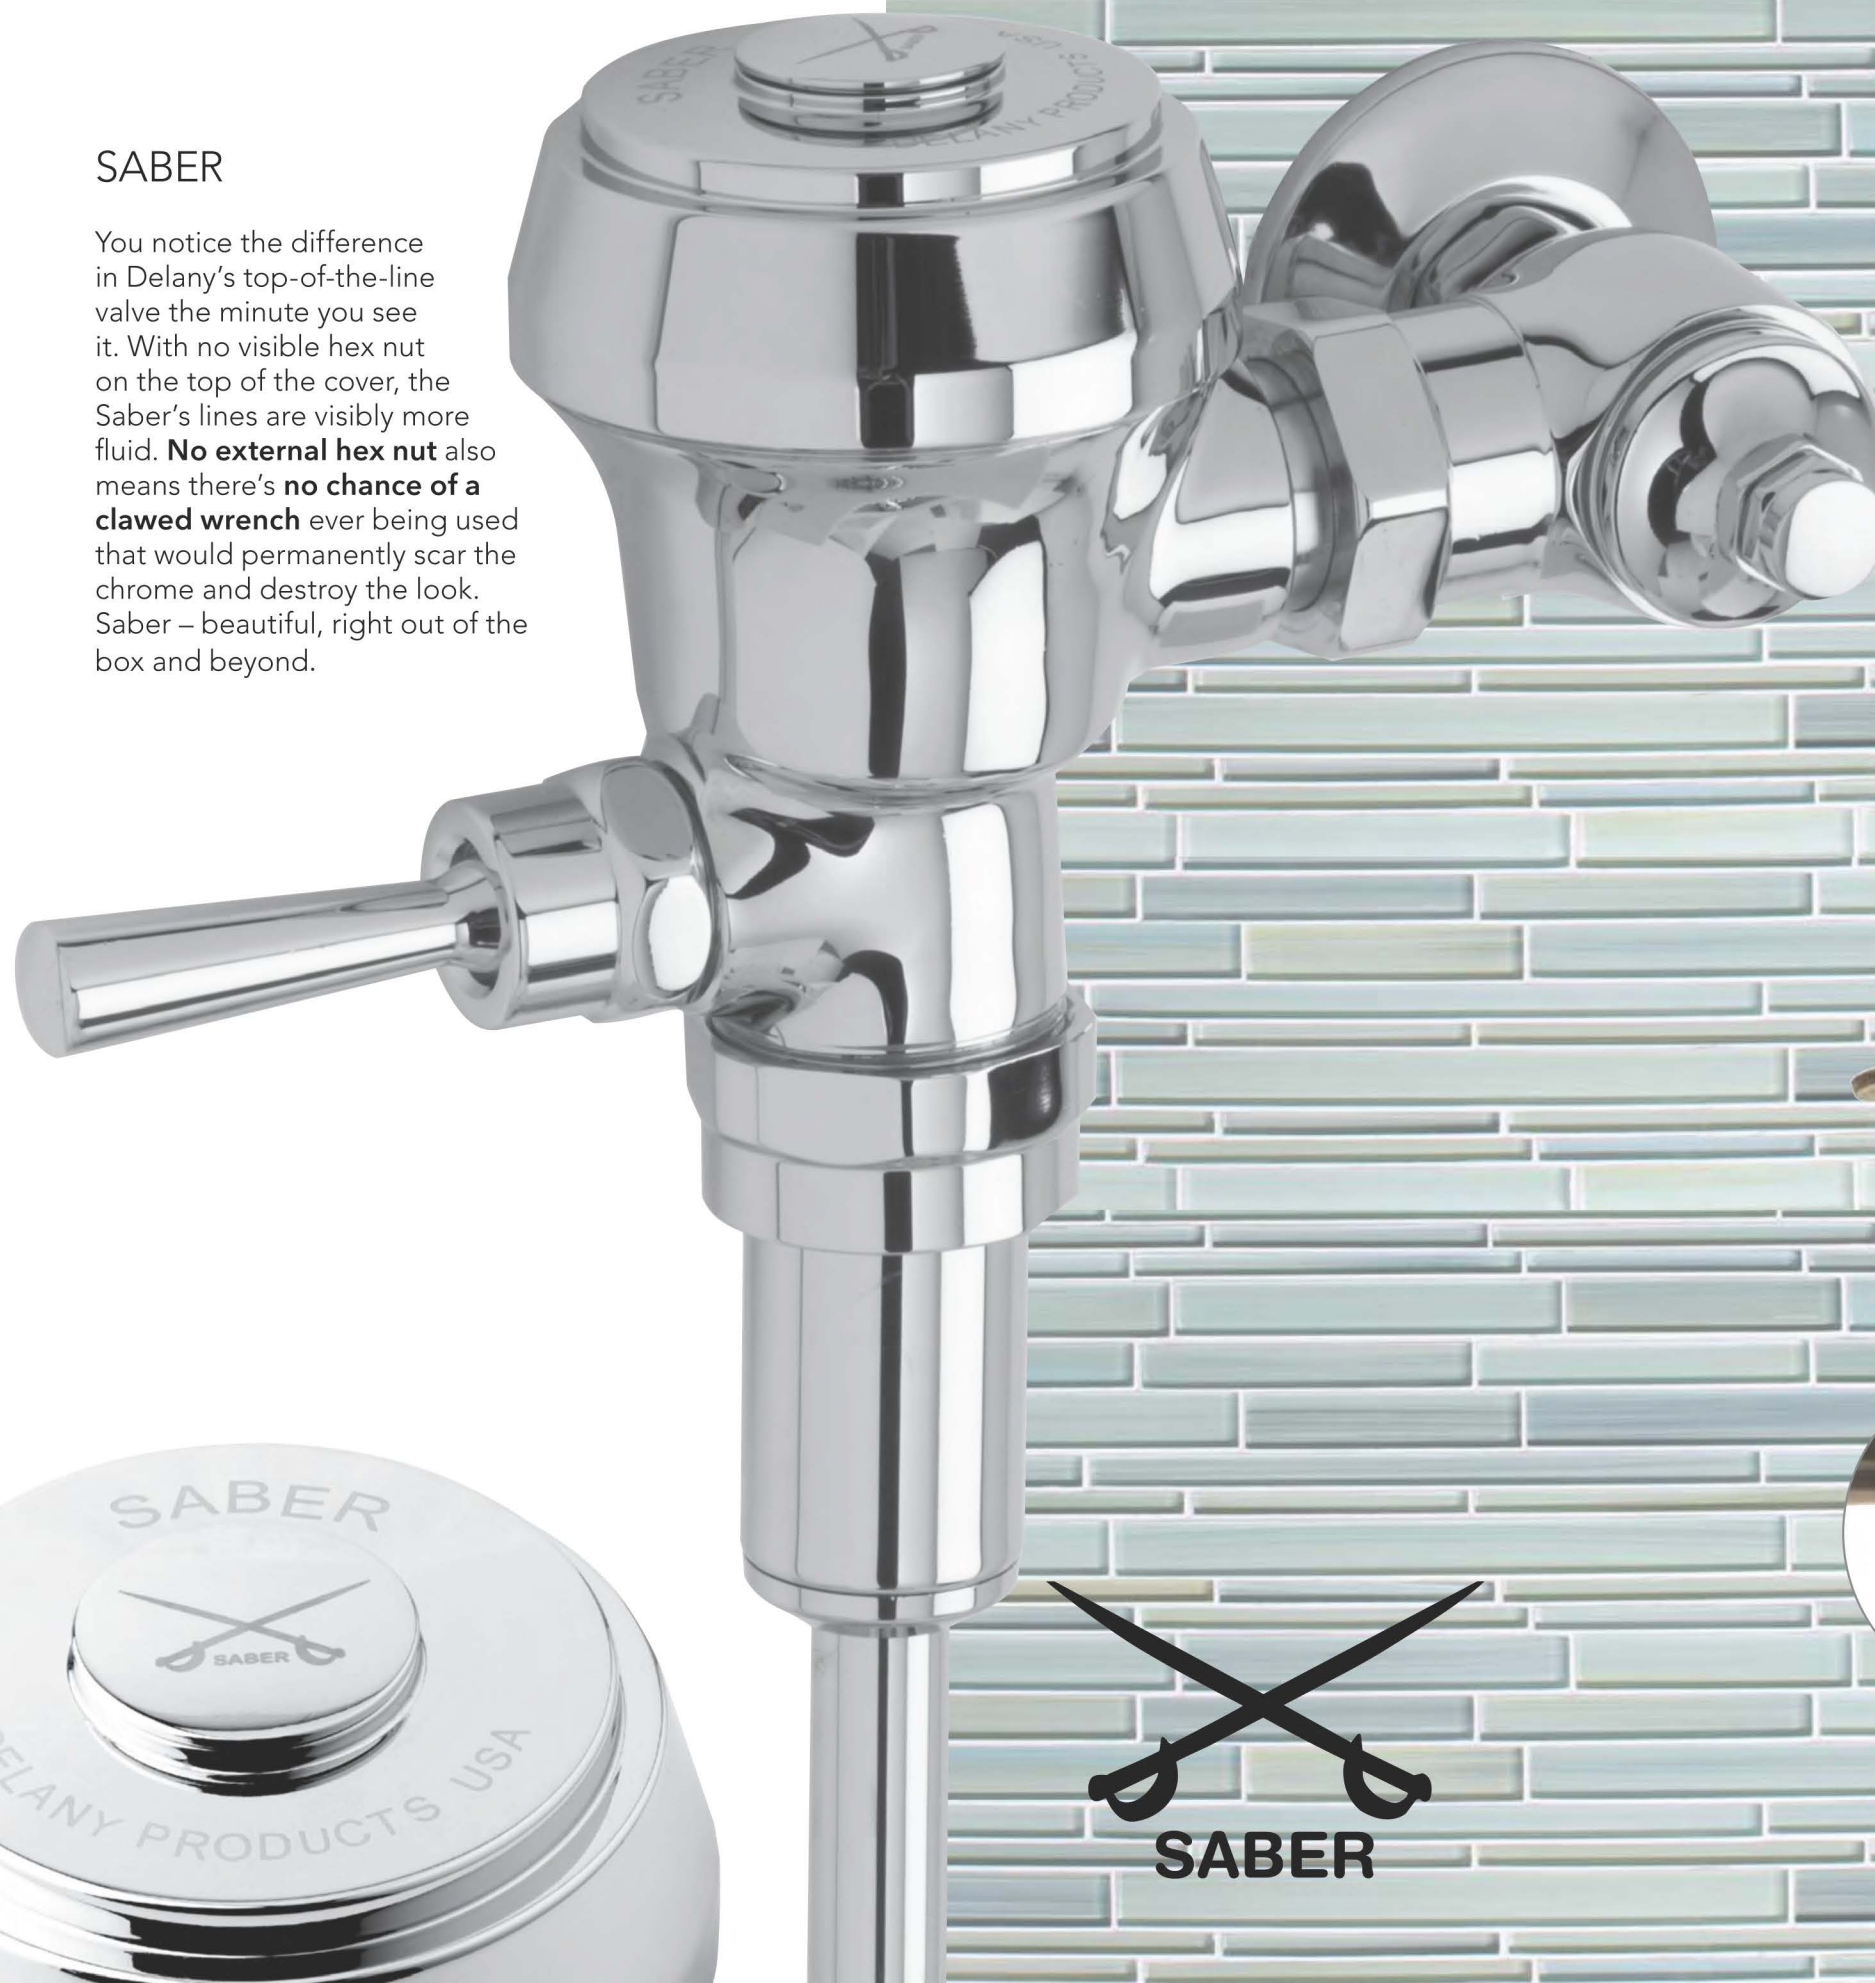

TrueSense =

SABER

You notice the difference in Delany's top-of-the-line valve the minute you see it. With no visible hex nut on the top of the cover, the Saber's lines are visibly more fluid. **No external hex nut** also means there's **no chance of a clawed wrench** ever being used that would permanently scar the chrome and destroy the look. Saber – beautiful, right out of the box and beyond.

The Differences

The smallest upper chamber of any valve on the market results in a valve that shuts off quickly, and provides consistent performance across the widest range of water pressures. A proven solution to many water hammer issues.

The Upper Chamber Regulating Screw allows for True-in-the-Field Water Conservation by allowing just a little more or a little less water in less than optimal circumstances.

Delany's Mashaerator diaphragm, standard on every Saber valve, prevents hard water build up and keeps the bypass free of debris.

"Recently we got a call regarding a commercial style automatic flush valve toilet installed in a building in the South Lake Union area of Seattle. Every time the flush valve was operated, there would be a water hammering sound...a Delany Saber Flush Valve was installed in place of the existing valve. From the first flush and every flush afterwards, the water hammering noise was completely gone. This my first experience with Delany Products and I am more than a little impressed."

Seattle Washington

TrueSense

TrueSense

Our newest **sensor activated, hands-free solution** for restrooms is the TrueSense. This **in-wall design** uses **state-of-the-art technology** that allows TrueSense to be offered as the traditional hardwired version, but also with a plug-in transformer or even a battery powered option.

The Differences

Sleek wall plate designs add style and beauty to any commercial restroom.

Low 9V voltage system means minimal need for an electrician saving time, money, and HEADACHES.

With either 110/60 or 220/50 cycle options, it can be used anywhere in the world.

Its One Touch-Flush™ override button is the first ever electronic override button that provides one full flush.

True Mechanical Override button optional

"I wanted the TrueSense to stand out as a beautiful work of art. I started with a modern looking chrome-plated wall plate with no visible mounting screws. Then we added stark electronic sensor windows and override pushbutton for a clean minimalist design."

Martin Laverty,
Chief Designer,
Delany Products

Pulsar v2.0

"At the Covenant Lower School we trust the Pulsar electronic valve and its hands-free feature as it provides a more hygienic solution for our young students. Delany Products stands behind its valves and I really, really like the Pulsar!"

Will Hatter
Covenant Lower School
Charlottesville, VA

The Pulsar V2.0 is a sensor activated, battery powered flush valve with an automatic dual flush feature. The Pulsar V2.0 with **SmartChoice Technology** software determines automatically whether a heavy flush or lighter water-saving flush volume is needed. Seamlessly and automatically, it works to save water while providing maximum hygiene.

The Differences

100% US manufactured solenoid, tested to over 4,000,000 operations and a single, lithium battery with 10-year shelf life.

Fastest installations, thanks to its simple fully self-contained electronics, and set screw cover design.

SmartChoice Technology allows the Pulsar to be the only field adjustable electronic flush valve on the market, providing True-in-the-Field water savings.

Pulsar

The Empire is our **piston operated flush** valve with **strikingly sleek lines** and all the features and benefits one expects from Delany Products.

The Differences

The solid brass piston cartridge offers maximum durability and added performance in low psi conditions, while its nickel plating helps to prevent the build-up of impurities.

With its Main Valve Seat below the supply line inlet, supply lines can be flushed with 100% confidence.

Infinite Series Faucets

Having no boundaries or limits, this is the promise of the Infinite line of faucets. The **four distinctively different styles** allow for design options in any type of bathroom, while the **water-saving features** and **ease of installation** make these the ONLY faucets worthy of the name Delany.

The Differences:

100% Solid Brass Construction

Programmable hygiene flush to control bacteria growth.

Programmable "on" "off" feature

Remote control adjustments

go green series
INFINITE
