Scott,

"The Delany TruStop solved our single biggest plumbing headache. In a large school building, you can't just shut off the main water during the day to fix one flush valve; it disrupts hundreds of students and staff. We had to schedule major shutdowns. The TruStop, with its ball valve design, lets us isolate a single fixture. The time and money this saves us is enormous."

"I also like the design from a preventative standpoint. With no washer to fail, we're preventing the floods that are caused by failed older control stops. The fact that it's compatible with the mix of flush valve brands we have from 1974 just sealed the deal. We're replacing all our stops with them. It's the right product for any large or small facility."

Scott Thibault

Head of Plumbing Dept and Plumbing Maintenance

Ranked in the top 15 of all Vocational High Schools in Massachusetts
